***Massimiliano Sarra**, in accordance with the Conflict of Interest Regulations approved by AIFA Board of Directors (25.03.2015) and published on the Official Journal of 15.05.2015 according to EMA policy /626261/2014 on the handling of the conflicts of interest for scientific committee members and experts.

N.B. I am not receiving any compensation

Summary

- History of the legislaion on CT
- The new regulation 536/2014:
 - Scope and definitions
 - New Evaluation Process
 - European Union Portal and Database
 - Transparency
 - Safety
- The CTFG
- VHP
- National contribution and pilot project

Before May 2004

Directive 2001/20/EC

Regulation (EU) 536/2014

Different **processes and requirements** for clinical trial authorisations in each Member States...

... resulted in **delays and complications** detrimental to effective conduct of clinical trials in the EU.

First step to harmonise **processes and requirements** for clinical trial authorisations.

Implementation **1 May 2004**.

Concerns expressed soon after its implementation.

Published on **27 May 2014**.

Application 6 months after confirmation published in the OJ of **full functionality of EU portal and EU database**, in any event **not earlier than 28 May 2016**.

Transitional arrangements.

Directive 2001/20/CE

Directive 2001/20/CE

- Different Assessments
- Different Timelines
- Different Outcomes/Decisions

Need to consolidate documents
by submission of Substantial
Amendments

Regulation 536/2014/CE

Regulation 536/2014/CE

- Consolidated Assessments
- Clear Timeline
- Documents harmonized

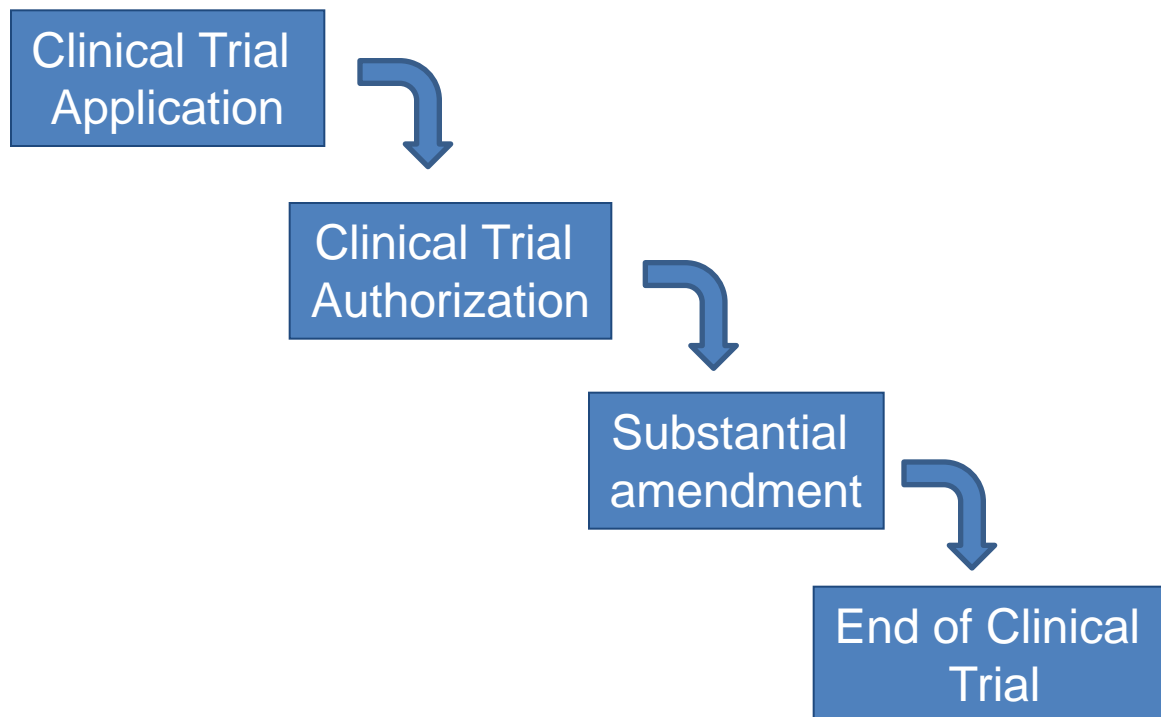

Rationalization of resources for National Competent Authorities (NCA) and cost reduction for the Companies

Aims of Directive 2001/20 EC

- The protection of the health and safety of clinical trial participants
- The ethical soundness of the clinical trial
- The reliability and robustness of data generated in clinical trials
- Simplification and harmonisation of the administrative provisions governing clinical trials in order to allow for cost-efficient clinical research
- *This “should be achieved while promoting high-quality research in the EU and the competitiveness of the European pharmaceutical industry.”*
 - Did the Directive meet its objectives?

Clinical trial Lifetime

Submission of a new CT under the directive 2001/20

Request of EudraCT number

EudraCT is a database of all clinical trials which commenced in the Community from 1 May 2004, and also includes clinical trials linked to European paediatric drug development.

Submission of a new clinical trial/substantial amendment

Detailed guidance on the request to the competent authorities for **authorisation of a clinical trial** on a medicinal product for human use, **the notification of substantial amendments** and the declaration of the end of the trial (CT-1).

- Cover letter
- Clinical Trial Application (CTA) Form

Eudralex Vol. 10

Chapter III - Quality of the investigational medicinal product

Volume 4 EU Guidelines to Good Manufacturing Practice
Medicinal Products for Human and Veterinary Use Annex 13
Investigational Medicinal Products

**[Good manufacturing practices for manufacture of
investigational medicinal products](https://ec.europa.eu/health/sites/health/files/files/eudralex/vol-4/2009_06_annex13.pdf)** (Annex 13)

https://ec.europa.eu/health/sites/health/files/files/eudralex/vol-4/2009_06_annex13.pdf

“Detailed Commission guidelines on good manufacturing practice for investigational medicinal products for human use, pursuant to the second subparagraph of Article 63(1) of Regulation (EU) No 536/2014

https://ec.europa.eu/health/sites/health/files/files/eudralex/vol-10/guideline_adopted_1_en_act_part1_v3.pdf

Guideline on manufacturing of medicinal products

Chemical IMPs

[Guideline on the requirements to the chemical and pharmaceutical quality documentation concerning investigational medicinal products in clinical trials](#)

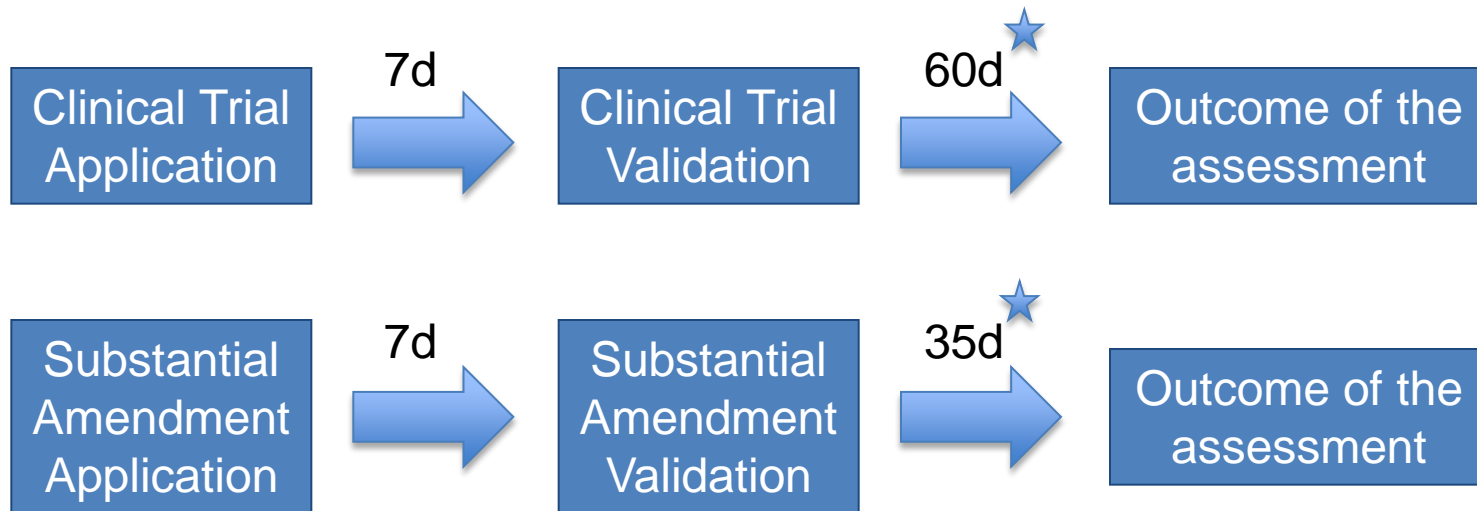

Biological IMPs

[Guideline on the requirements for quality documentation concerning biological investigational medicinal products in clinical trials](#)

NIMP

[Guidance on Investigational Medicinal Products \(IMPs\) and "non investigational medicinal products" \(NIMPs\)](#)

Timelines under the directive 2001/20

- A single opportunity to ask the Sponsor to provide further information on the CT/SA application exists (Grounds for Non-Acceptance).
- Sponsor reply is expected within 30 days; the timeline is under clock-stop.
- If no GNAs or GNAs resolved the CT/SA Application can be authorized.

End of a clinical trial

Declaration of the end of a clinical trial

'Within 90 days of the end of a clinical trial the sponsor shall notify the competent authorities of the Member State or Member States concerned and the Ethics Committee that the clinical trial has ended. If the trial has to be terminated early, this period shall be reduced to 15 days and the reasons clearly explained.'

Why change from the Directive?

- *Improvements in the safety and ethical soundness of clinical trials in the EU and in the reliability of clinical trials data. Also increased cooperation between MS; however...*
 - Decrease in EU CTAs (2007-2011)
 - Increase in costs
 - Increase in delay to trial initiation
 - Different requirements in different MS
- Not all because of Directive 2001/20/EC but it is *“Arguably the most heavily criticised piece of EU-legislation in the area of pharmaceuticals.”* (European Commission)

Directive versus Regulation

Implemented in national laws

Directly applicable

Objectives of new CTR

- To protect the rights, safety, dignity and well-being of subjects and the reliability and robustness of the data generated in the CT;
- To foster innovation and simplify the clinical trial application process, in particular for multistate trials;
- To increase transparency, keeping the balance between protecting public health and fostering the innovation capacity of European medical research while recognising the legitimate economic interests of the sponsors.

Overall objective: Make EU attractive for R&D.

When will the Regulation come into Force?

Article 99 shall apply “no earlier than 28th May 2016” (6 months after successful audit of IT system).

Transitional aspects

Date of publication of
Regulation

April 16th 2014

Date of application of
Regulation

2016 – 2018 – 2019 - 2020

Scope and Definitions

Article 1

Scope

This Regulation applies to all clinical trials conducted in the Union.

It does not apply to non-interventional studies.

(2) 'Clinical trial' means a clinical study which fulfils any of the following conditions:

- (a) the assignment of the subject to a particular therapeutic strategy is decided in advance and does not fall within normal clinical practice of the Member State concerned;
- (b) the decision to prescribe the investigational medicinal products is taken together with the decision to include the subject in the clinical study; or
- (c) diagnostic or monitoring procedures in addition to normal clinical practice are applied to the subjects.

(3) 'Low-intervention clinical trial' means a clinical trial which fulfils all of the following conditions:

- (a) the investigational medicinal products, excluding placebos, are authorised;
- (b) according to the protocol of the clinical trial,
 - (i) the investigational medicinal products are used in accordance with the terms of the marketing authorisation; or
 - (ii) the use of the investigational medicinal products is evidence-based and supported by published scientific evidence on the safety and efficacy of those investigational medicinal products in any of the Member States concerned; and
- (c) the additional diagnostic or monitoring procedures do not pose more than minimal additional risk or burden to the safety of the subjects compared to normal clinical practice in any Member State concerned;

This Regulation applies to all clinical trials conducted in the Union.

It does not apply to non-interventional studies.

Non- Vs Low-Interventional Clinical trials

Unchanged scope: Interventional clinical trials with medicinal products for human use

NEW category of low-intervention clinical trials with adapted requirements.

- The investigational medicinal products (IMP) are authorised;
- If the IMP is not used in accordance with the terms of the MA, that use is supported by published scientific evidence on S&E;
- Minimal additional risk or burden to the safety of the subjects compared to normal clinical practice.

Not covered: Non-interventional trials;

Trials without medicinal products (e.g. devices, surgery, etc).

Emergency trial

Article 35: Clinical trials in emergency

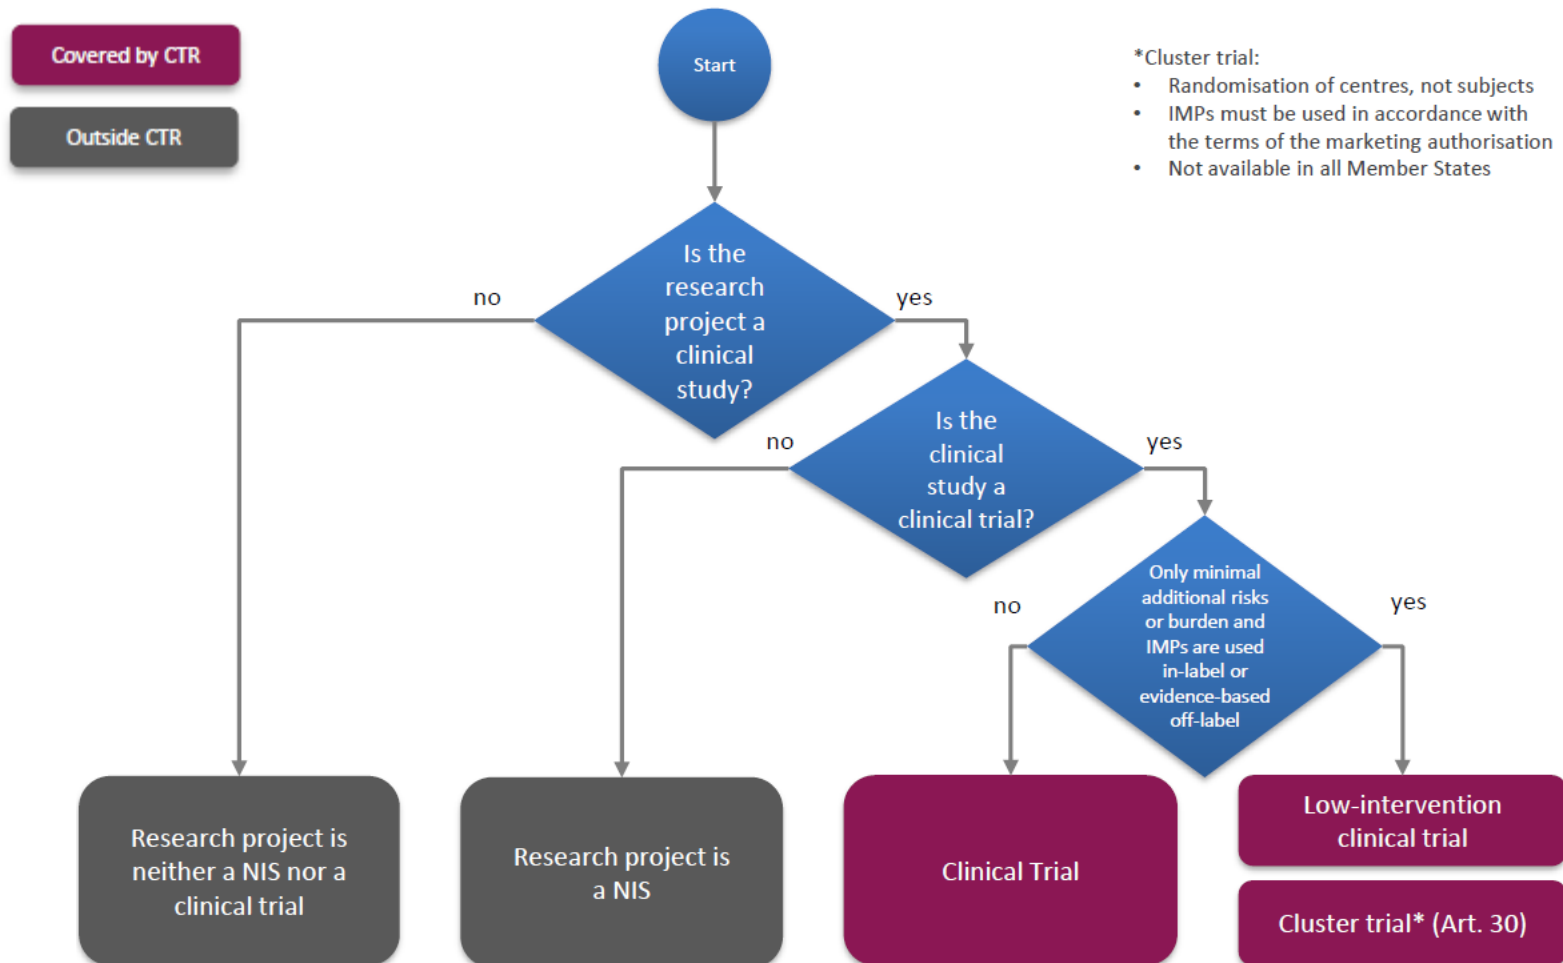

- Consent given after decision to include subject in the trial (as per the protocol)
- Urgent, life-threatening or sudden serious condition
- Expectation of direct clinical benefit (trial relates to that condition)
- Timing means impossible to give prior info or get IC
- Investigator certifies that they are not aware of any subject objections (expressed previously)
- Trial poses minimal risk and burden

Emergency trial

Article 35: Clinical trials in emergency

- After intervention – provide information and obtain IC to continue in trial from subject or legal rep.
- If consent is from legal representative – consent to continue is obtained from subject as soon as he or she is capable
- If subject (or legal rep) does not give consent he or she shall be informed of the right to object to the use of data obtained from the clinical trial.

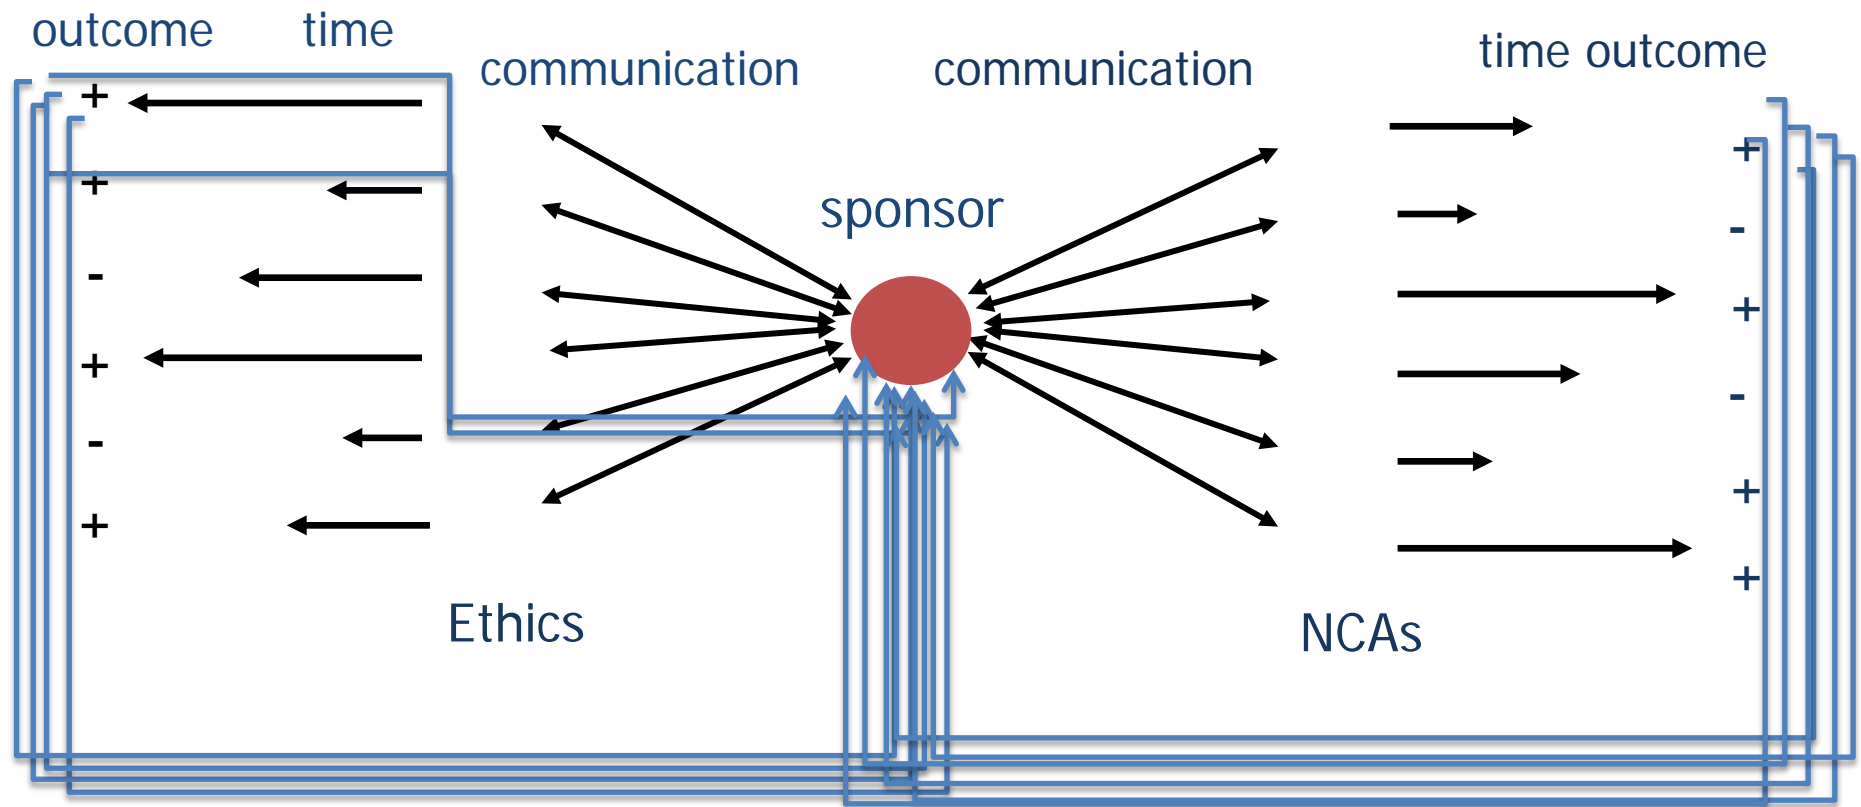

Classification Algorithm

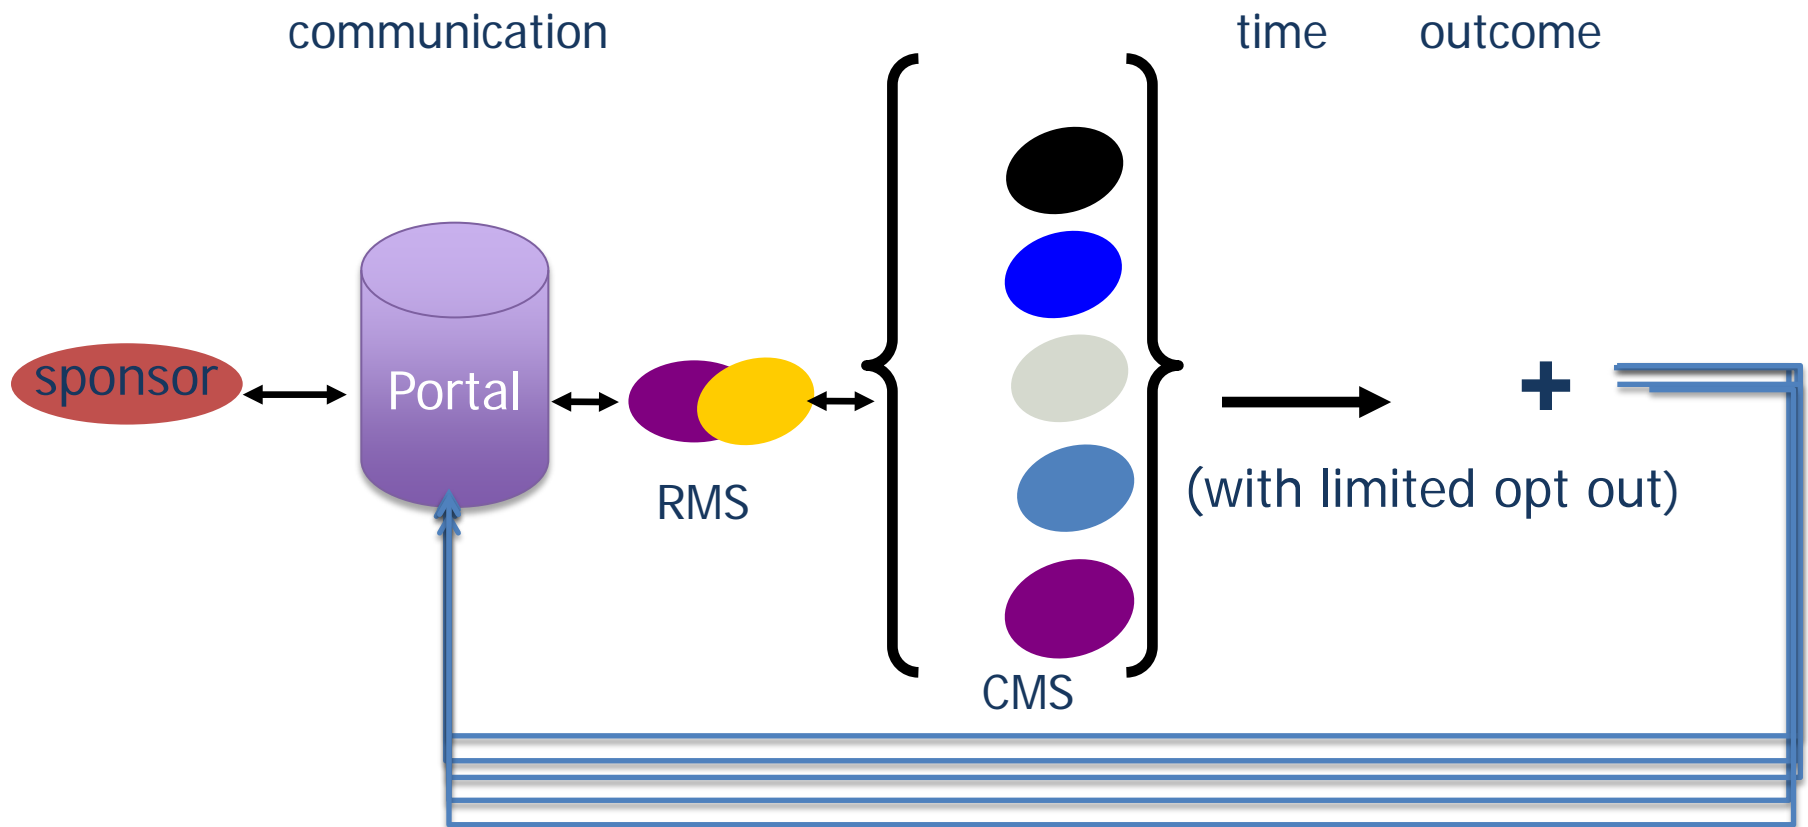

New simplified approval procedure

- Single EU Portal & Database
- Single dossier and single submission
- Sponsor can propose Reporting MS
- Coordinated assessment for multi-state clinical trials
 - Part I – joint assessment by all concerned MS (NCA+EC), led by RMS
 - Part II – National assessment only (R&D offices and Ethics Committee)
- Clear timelines (extended compared with Directive), concept of tacit approval

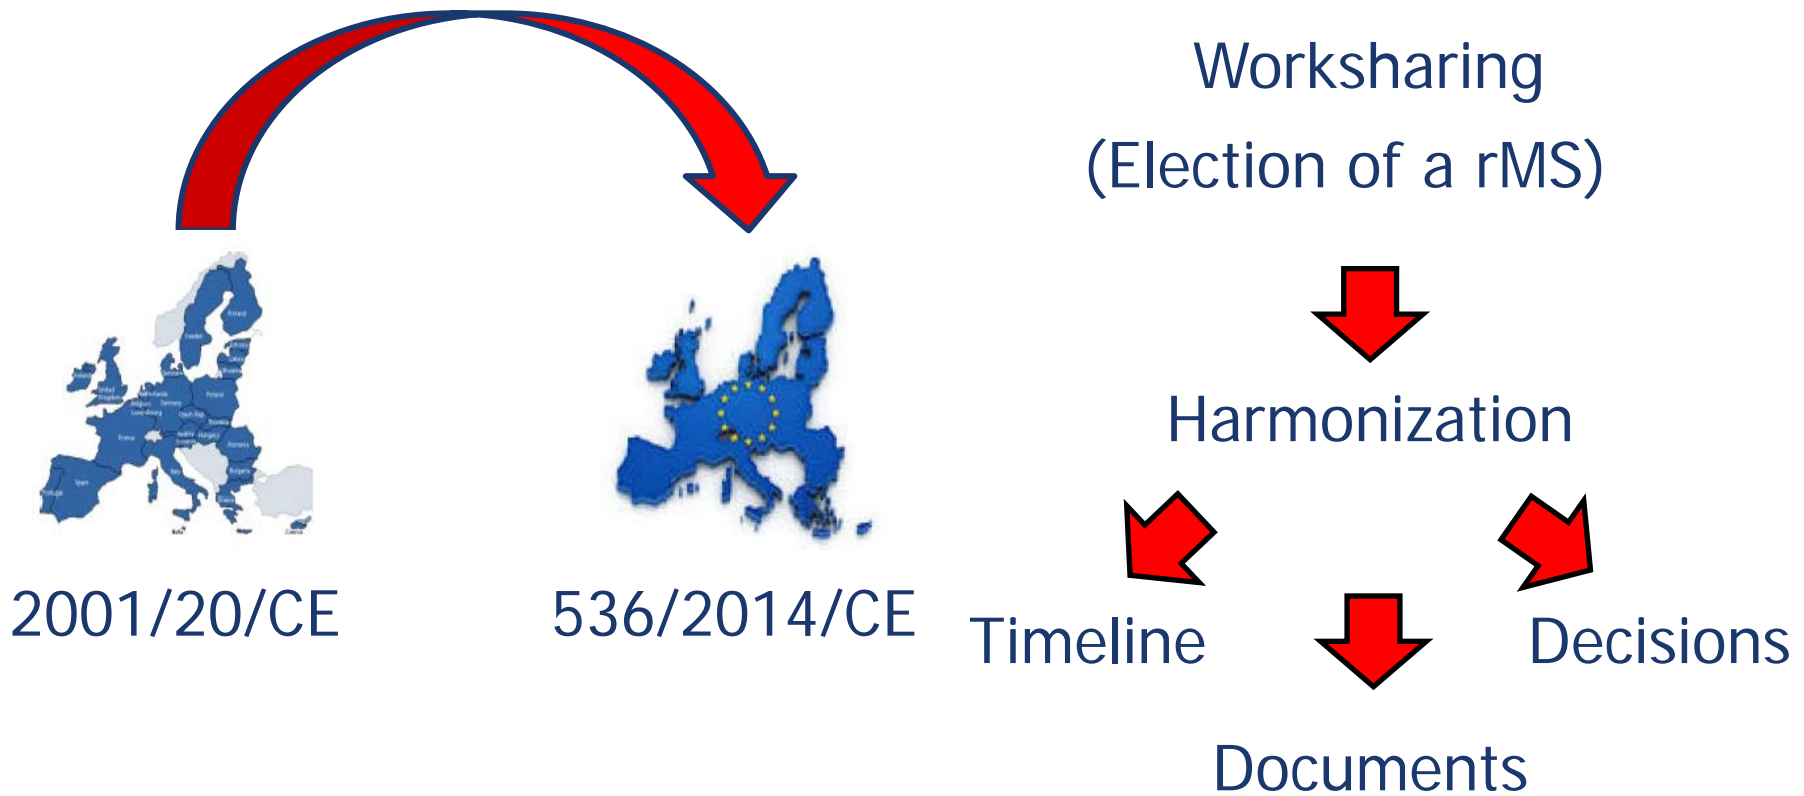

EU Multi-national clinical trials: current situation

EU Multi-national clinical trials: under new Regulation

New Evaluation Process

Mononational CT

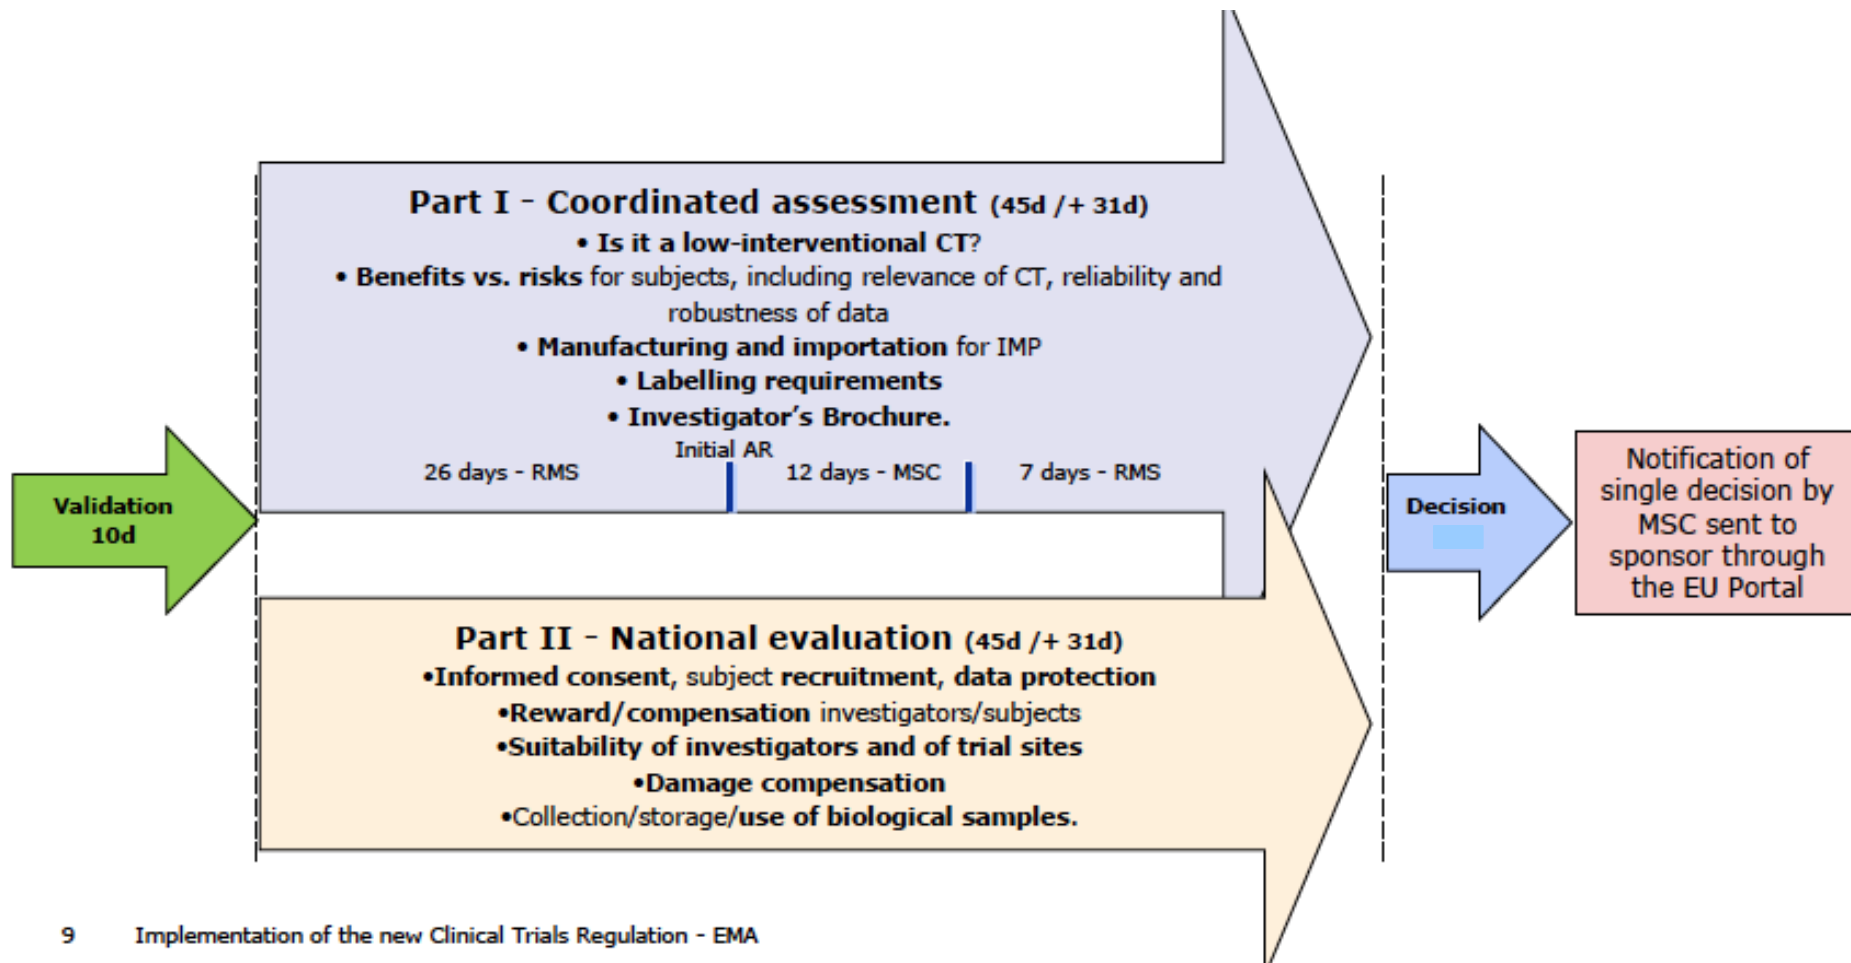

RMS assesses the aspects of part I, generates an assessment report (AR), and formulates a conclusion (acceptable, acceptable with conditions, not acceptable) between the validation date and the reporting date.

Multinational CT

For multinational trials, this happens in 3 phases :

- Initial assessment phase (drafting of the AR by the RMS)
- Coordinated review phase (all member states review the draft AR and share their considerations)
- Consolidation phase (consolidation of the considerations in a final part I AR)

ARTICLE 6

Validation of an initial submission

- Does the CT falls within the Scope of CTR?
- Is the CTA complete in accordance with Annex I (APPLICATION DOSSIER FOR THE INITIAL APPLICATION)
- rMS shall validate the CTA
 - if no considerations → Evaluation process starts
 - in case of request of additinal information from the MS → Sponsor should provide missing information to allow the evaluation process start

ARTICLE 5

Validation process timelines

RMS+CMS no
Considerations

Beginning of the
evaluation process

10 days

RMS+CMS request
of additional
information

10 days

Sponsor provides
missing information

10 days

RMS check and
validate

5 days

Beginning of the
evaluation process

CMS requests should be sent
to the RMS within 7 days

ARTICLE 5

Assessment Part I

- (a) Low-intervention clinical trial or not
- (b) Compliance to chapter V with regard to the benefits (IMP, relevance, reliability of the data) and the risks (IMP, AMP, comparison with normal clinical practice, safety measures, risk of the medical condition) of the trial
- (c) Manufacturing & import of IMP & AMP (chapter IX)
- (d) Labelling requirements (chapter X)
- (e) Completeness & adequateness of the Investigators Brochure

ARTICLE 6

Assessment procedure (Multinational CT)

- D0: validation date of the application
- D26: draft Part I AR made available by the RMS (initial assessment phase)
- D38 (+12): all CMS can share considerations (coordinated review phase)
- D45 (+7): RMS finalizes the Part I AR (consolidation phase); the final assessment report from the RMS submitted to the EU Portal (reporting date)

ARTICLE 6

Request of Additional information by the RMS

The RMS can request additional information from the sponsor between validation date and reporting date – timeline is extended (31 days):

- ✓ Sponsor submits the additional information within 12 days
- ✓ The answer is jointly reviewed by all CMS, considerations are shared within 12 days
- ✓ Final consolidation by the RMS within 7 days.

ARTICLE 6

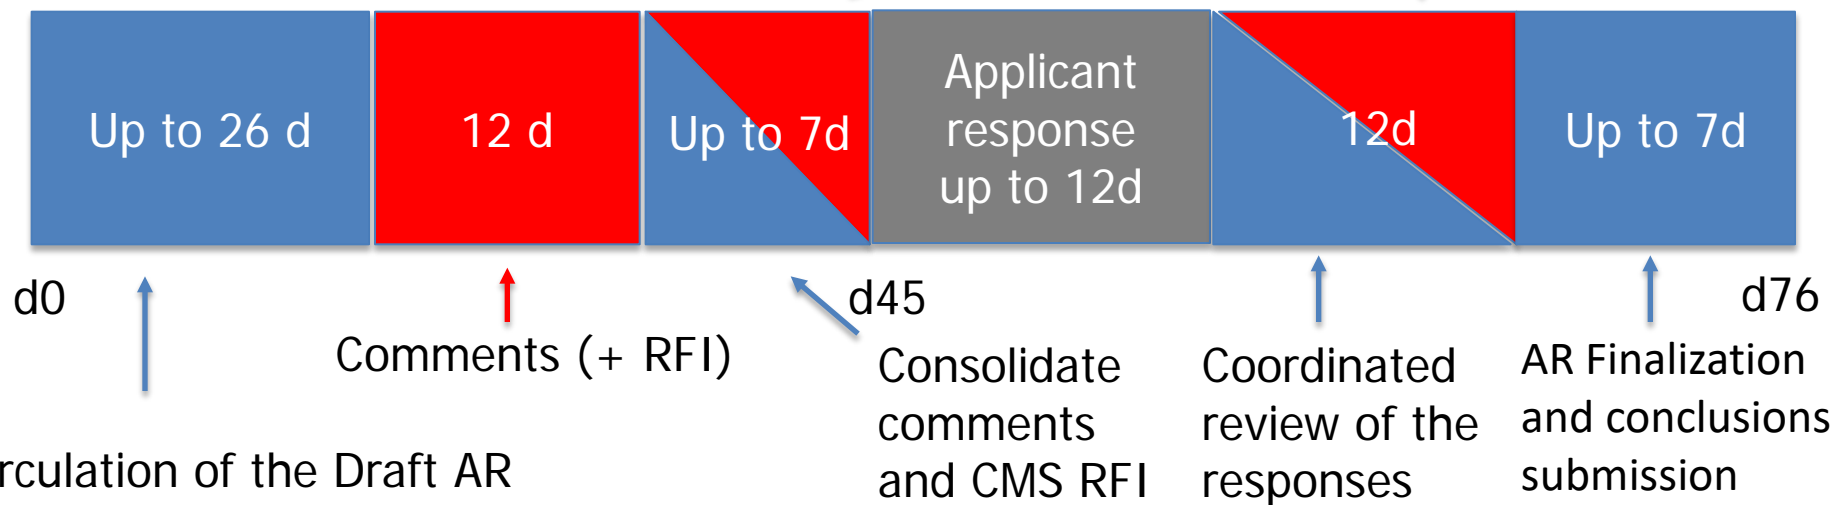

Schematic overview of timelines for an initial application

(A) NO request of further information (RFI)

(B) Request of further information (RFI)

Schematic overview of timelines for a substantial modification application

(A) NO request of further information (RFI)

(B) Request of further information (RFI)

Outcome of the assessment

- The CT is authorized: The trial can start in the MS who have authorized the CT
- The Authorization of the CT is refused: The trial cannot start
- The CT is authorized subject to specific conditions. Conditions should not impact on the B/R profile and should be requirements that by their nature cannot be fulfilled at the time of the authorisation.

The trial can start

Assessment Part II

- All MSC assess (for their own territory), the aspects of part II, generate a part II AR, and formulate a conclusion
- Aspects of part II :
 - (a) Requirements for informed consent (chapter V)
 - (b) Compensation of subjects and investigators
 - (c) Recruitment arrangements
 - (d) Compliance with the rules on data protection
 - (e) Suitability of individuals involved in the conduct of the trial
 - (f) Suitability of the clinical trial sites
 - (g) Damage compensation
 - (h) Collection, storage and future use of biological samples

Timeline for Assessment of part II

- D0: validation date of the application
- D+45 : final assessment report from each MSC submitted
- All MSC can request additional information from the sponsor between validation date and reporting date – timeline is extended with 31 days
- Sponsor submits the additional information within 12 days
- Final assessment by the MSC shall be performed within 19 days.

Persons assessing the application

1. Member States shall ensure that assessors:
 - have no conflicts of interest (financial or personal),
 - are independent,
 - are free of any other undue influence.

2. Member States shall ensure that the assessment is done jointly by a reasonable number of persons who collectively have the necessary qualifications and experience.

3. At least one lay-person shall participate in the assessment.

The Clinical Trial Information System

- Recital "...the Agency should, in collaboration with Member States and the Commission, set up and maintain an EU database, accessed through an EU portal."
- Article 80: "The Agency shall, in collaboration with the Member States and the Commission, draw up the functional specifications for the EU portal and the EU database, together with the time frame for their implementation."
- The Regulation 536/2014 (Art. 82) provides the legal basis for the development of the EUPD and EMA collaborates with MS, EC and the stakeholders for the development.

The Clinical Trial Information System

- EMA should provide, handle and update the informatic systems in collaboration with MS and EC
 - EU Portal e database (Art. 80, 81, 82 e 84)
 - Safety Reporting (Art. 40 e 44)
 - EudraCT e fase transitoria (Art. 98)
- The database should have a public access that assure the data protection as well as the confidentiality of the communications among the MS.
- The EUPD should be the only access for clinical trial application

Revised Timelines

September 2015

- V.1 Go live Oct. 2017
- Regulation applicable Dec. 2017

March 2016

- V.1 Go live Sep. 2018
- Regulation applicable Oct. 2018

October 2017

- V.1 Go live Jul. 2019?
- Regulation applicable Jul. 2019?

2018

- V.1 Go live 2020?
- Regulation applicable 2020?

Safety reporting in the context of a clinical trial

- EMA shall set up and maintain an electronic database for the safety reporting (ASR).
- The database shall be a module of the Eudravigilance database (SUSAR).
- The safety reporting should be made through a specific web-based structured form developed by EMA in collaboration with the MS.

Safety Reporting under Reg. 536/2014

Safety Reporting under Reg. 536/2014

- The Agency shall, by electronic means, forward to the Member States concerned the information reported in accordance with Article 42 and 43.
- Member States shall cooperate in assessing the information reported in accordance with Articles 42 and 43.
- The Commission may, by means of implementing acts, set up and modify the rules on such cooperation.
- The Commission assigned CTFG task to develop cooperation procedure

Safety Reporting under Reg. 536/2014: The Sponsor Role

Submission of the safety information to the portal is a Sponsor's responsibility.

Submission of one single ASR in the format on a DSUR (ICH E2F) is strongly recommended if the same IMP (or combination) is used in several CTs. However, the MS concerned can accept (as an exception) a trial-specific ASR if this is justified.

Safety reporting during the transition period

Nationally if the CT is under
the 2001/20

Through the Portal if the CT
is under the 536/2014

Safety reporting during the transition period

Same IMP in different CTs submitted under the 536/2014 or the 2001/20

The ASR should be submitted to the database specified in the regulation, thus leading to the coordinated assessment.

Sponsors are still obliged as of CT-3 to submit ASRs to Ethics Committees according to national legislations in MSs with ongoing clinical trials within Directive 2001/20/EC and inform investigators of any new safety data or change in benefit-risk evaluation.

Sponsors are strongly encouraged to name all MSs concerned for all ongoing CTs in EU/EEA (i.e. in the cover letter) within Directive as well as Clinical Trials Regulation (EU) 536/2014 and the CTs, respectively.

DSUR – Reg. 536/2014 Art.44

“Member states shall cooperate in assessing the information reported in accordance with articles 42 and 43.”

No details in the new regulation on:

- How to do it
- Roles and responsibilities
- Involvement of different regulatory bodies

Safety Reporting under Reg. 536/2014: The MS/CTFG Activity and the worksharing process

- To harmonize safety assessment of an Investigational Medicinal Product (IMP) and get common opinion on an IMP used in a CT.
- To improve transparency on (potential) safety issues among MS.
- To avoid duplicity of assessment, save resources and improve supervision of safety of CT participants.
- To trigger expedite actions, in order to facilitate harmonized corrective measures in clinical trials when appropriate and needed.

Safety Assessing Member State (saMS)

- Leading MS in coordinating all the activities related to the safety of an IMP (assessment of safety reports and upcoming safety issues)
- Is expert and communication hub for all MS concerned with a particular IMP/API
- Might be different from the RMS (IMP-based selection), and not for lifetime of CT/IMP

SaMS selection

First CT submitted with an IMP in EU/EEA

- The selection of the saMS is based on hierarchic approach:
 1. All MSC can volunteer for the saMS role/task
 2. In case of no volunteer or more than 1 volunteers a fair Work-share algorithm that takes into account the MS workload will be used
 3. Random selection in case of the same priority given by the algorithm.

Re-selection

After the finalization of the ASR assessment a re-selection of saMS can be initiated in specific cases where the saMS is no longer able to carry on the task (i.e. the CTs has been completed in the MS). The re-selection follows the same hierarchic rules.

“Leading saMS” and “AdHoc Assessment”

Safety issues concerning different IMPs (i.e. class effects AR) – More than one saMS/RMS involved – one will coordinate.

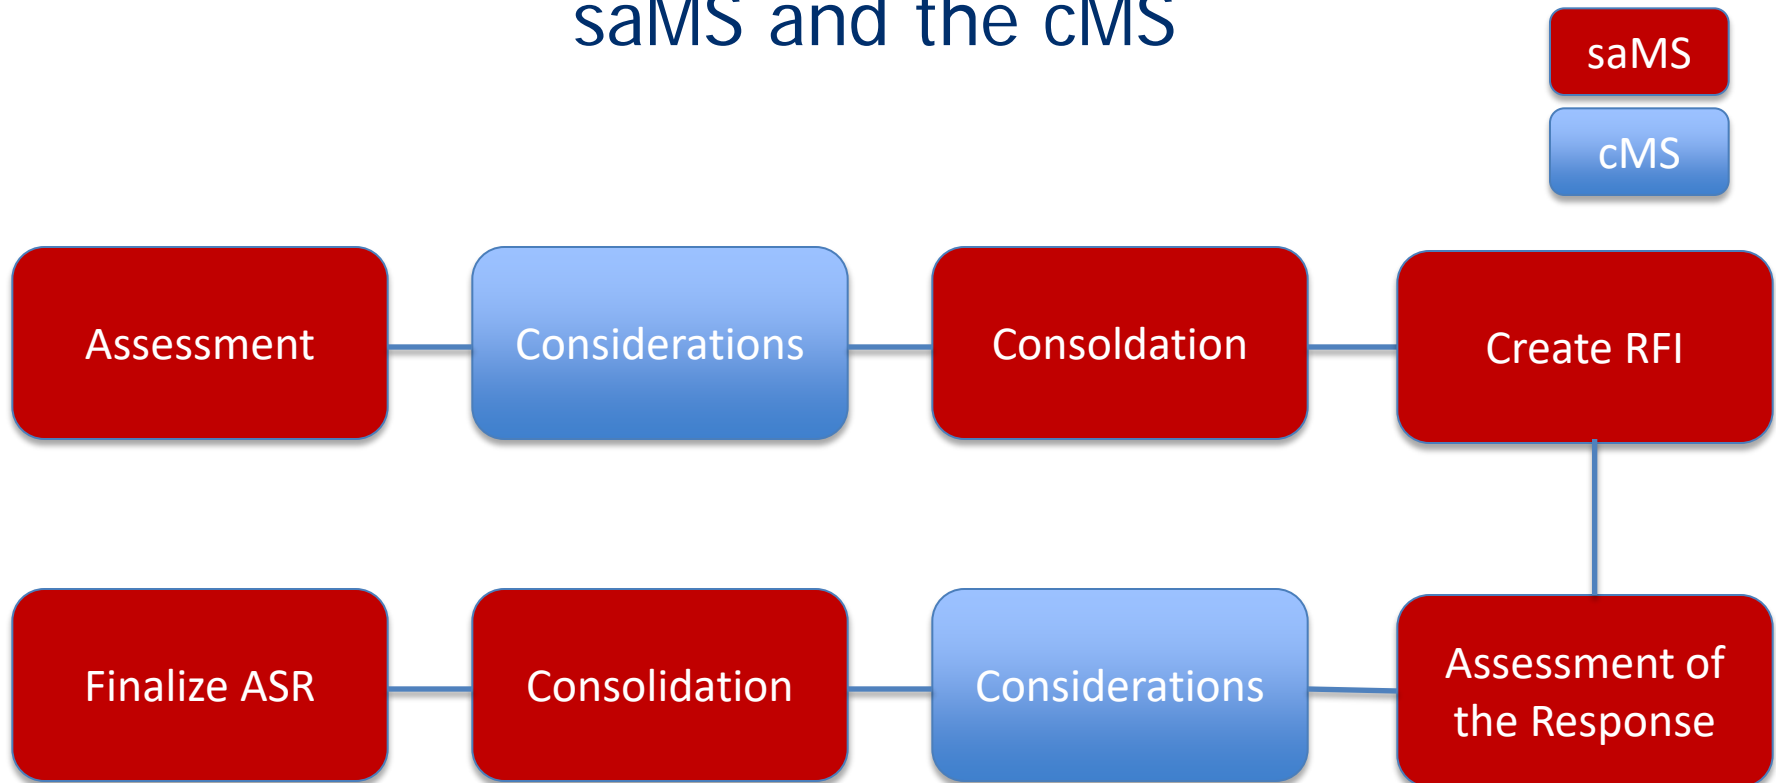

Need to take action following serious breach, unexpected event, urgent safety measure, temporary halt notification submitted by the sponsor or other information received from different/other sources.

- Selection of a “leading” saMS who lead and coordinate the ad hoc assessment activity involving exchange with the other saMSs, while these involve all MSCs (RMS, CMS).
- Need of tight collaboration and harmonization among all the parties involved.
- If not ASR assessment it is called ‘AdHoc Assessment’ in CTIS

MS Assessment Workflow: roles of the saMS and the cMS

Clinical Trials Facilitation and Coordination Group

CTFG

ASR Worksharing CTFG Project

- The project is coordinated by CZ and currently 19 NCA join the work-sharing activity
- MS collaborate in assessing ASR submitted by the Sponsors nationally on a voluntary-based project aimed at providing a coordinate review of the safety information
- MS who takes the lead of the assessment process is selected per IMP
- Almost 300 DSUR/ASR have been assessed from 2015 involved more than 230 IMPs

Challenges of the safety assessment

- ASR incl. reference safety information
 - Amount of information
 - Number of reports received
- SUSARs
 - Amount of signals received every day
 - Need to prioritize reactions
 - Need to assess the '*real potential risks*'
- Others e.g. urgent safety measures, halted CT, other sources
 - Need to coordinate rapid assessment, coordinated common responses and activity involving all the parties involved.

Transparency

- The Regulation requires that information contained in the clinical trial database shall be publicly available unless one or more of the following exceptions apply:
- protection of personal data;
- protection of commercially confidential information, in particular taking into account the marketing authorisation status of the medicinal product, unless there is an overriding public interest;
- protection of confidential communication between Member States in the preparation of their assessment;
- protection of the supervision of clinical trials by Member States

Transparency

- Disclosure rules published in October 2015: [EMA/42176/2014](#)
- Includes descriptions of what and when documents may be made public depending on stage of development, type of trial (therapeutic vs non-therapeutic) and type of document.
Publication rules based on three categories of trials
 - Category 1: Phase 1, bioequivalence / bioavailability / biosimilar trials
 - Category 2: Phase II and III (ie not Cat 1 or 3)
 - Category 3: Phase IV and low-intervention trials
- *Provides balance between encouraging innovation and providing extensive public information on clinical trials conducted in EU.*

The Clinical Trials Facilitation and Coordination Group (CTFG)

- Established by the European Heads of Medicines Agencies (HMA) in October 2004.
- To foster a common approach in regulatory requirements relating to clinical trials, across the Community.
- Consist of clinical trials professionals from the EU/EEA Medicines Agencies.

After the publication of the Regulation (EU) No 536/2014 on Clinical Trials (CTR), the CTFG has substantially supported the implementation of the CTR by Member States and the development of the EU portal and EU database, as well as the entire clinical trial IT system (CTIS).

CTFG Activities

- Sharing Scientific Assessment and Advice
- Risk mitigation and Evolution of clinical trials – horizon scanning
- Safety surveillance
- Harmonise processes and positions
- Training
- Participate in development of information systems
- Communication
- Cooperation with other Working groups

The Voluntary Harmonisation Procedure (VHP)

VHP applies to all phase I-IV MN CTs involving 2 or more Member States. It allows the joint assessment of the same documentation provided by the Applicant in a specific timeline, thus leading to the harmonized conclusion on the possibility to approve or reject the CT Application in all the Member States involved.

VHP: Main Characteristics

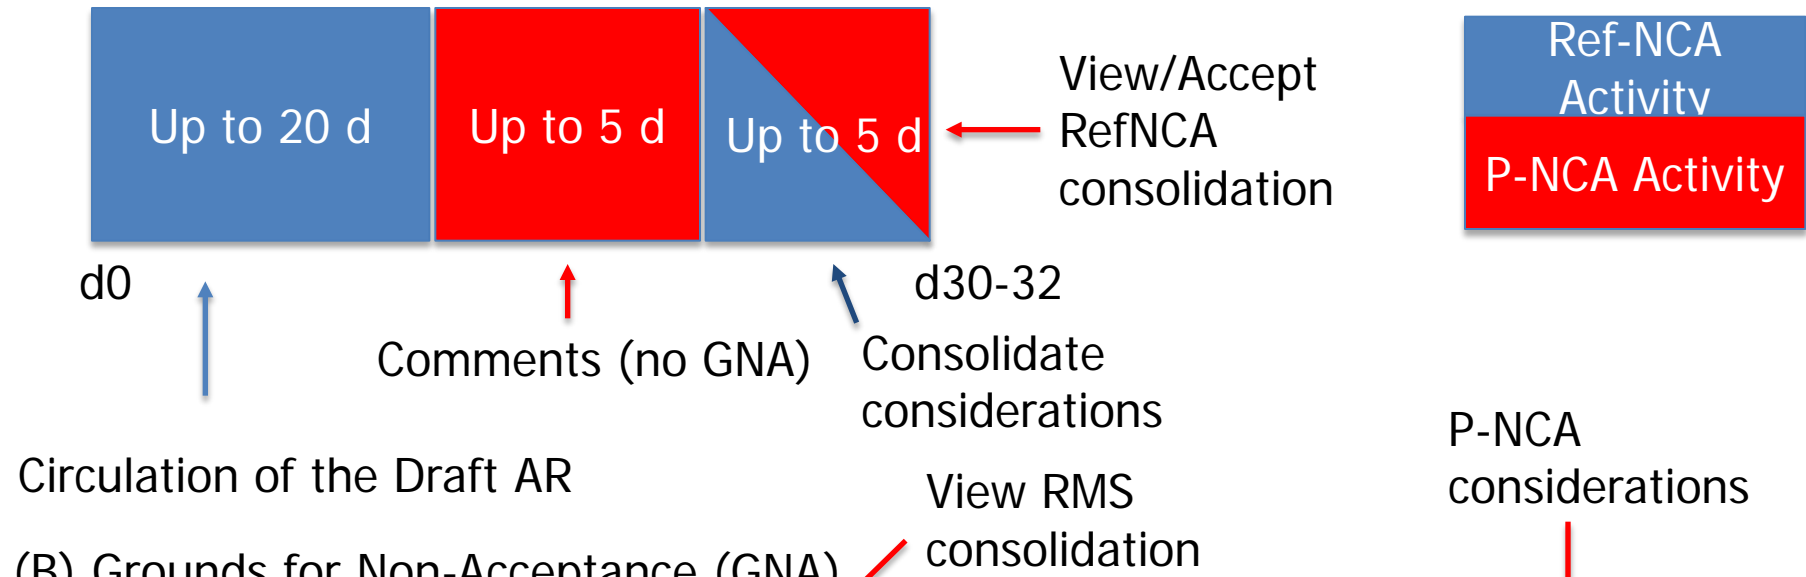

- Harmonization of the Documents (Protocol, IB, IMPD, risk/benefit) shared by the NCA through the VHP-DB
- A rigid and specific Timeline
- Nomination of a Ref-NCA that leads the assessment and collect the comments of the P-NCA
- Coordinated assessment of the CTA, thus leading to a single harmonized decision among the Member States involved

Single discussion involving all the NCAs concerned

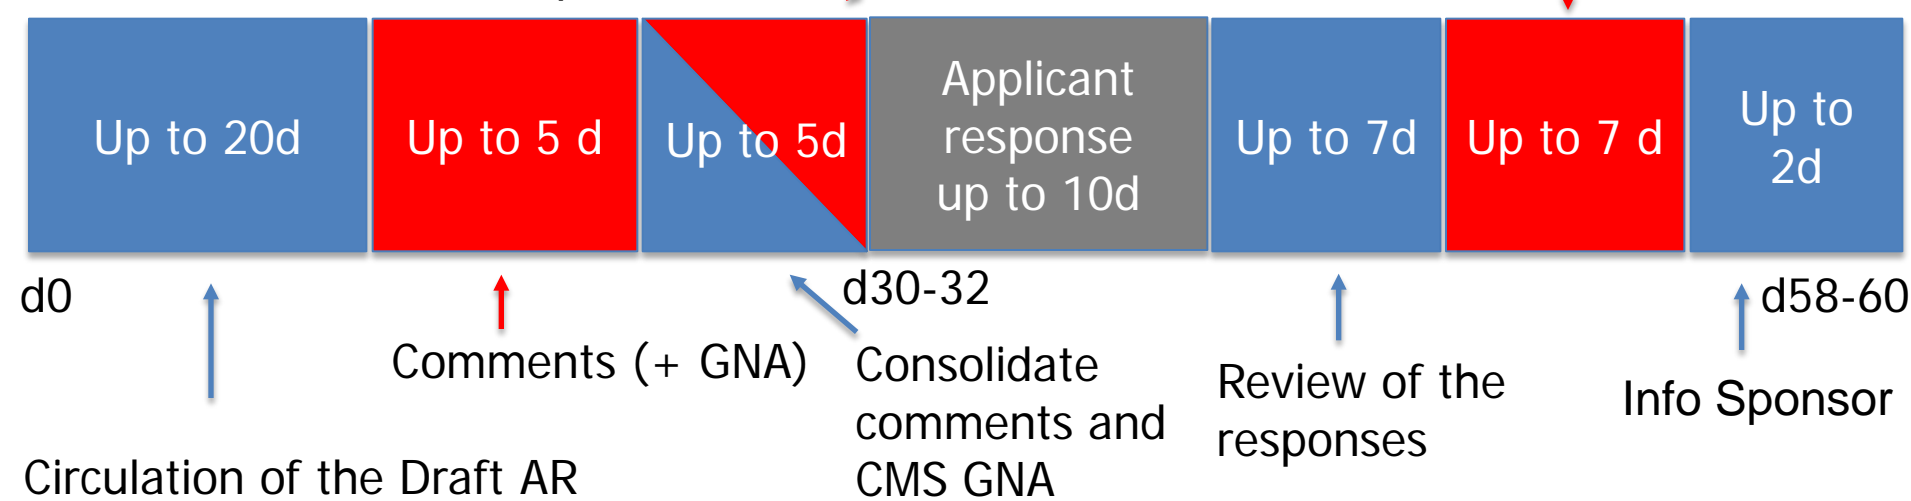

- The technical / scientific evaluation is carried out by an NCA (Reference-NCA) involved in the clinical trial application which will deal with drawing up a document (Assessment Report) made available for all the other NCAs (Participant-NCAs).
- This assessment usually includes a list of “objections” which if not resolved by the Applicant preclude the authorization of the study (Grounds for Non Acceptance - GNA).
- The other P-NCAs participate in the technical/scientific discussion by providing their comments on the Ref-NCA and adding GNAs (if any).
- The final list of GNAs is provided by the Ref-NCA who takes into consideration all the comments received and operates to harmonize the feedback received by all the NCAs involved.

Schematic overview of timelines and workflow for an Clinical trial application submitted via VHP

(A) NO Grounds for Non-Acceptance (GNA)

(B) Grounds for Non-Acceptance (GNA)

Schematic overview of timelines and workflow for a Substantial Amendment application submitted via VHP

N.B. No possibility to raise GNAs in VHP SA

Grounds for non Acceptance

- Issues that if not solved by the Applicant before the VHP conclusion will lead to a negative opinion.
- No possibility to raise question to have information nice to know/have.
- The GNA should lead to a request of document modification or a request of a rationale/justification on specific issues.

Outcome of the assessment

The feedback of the P-NCAs is always given to the decision of the Ref-NCA

Positive: The ref-NCA decision is agreed by the other P-NCAs

Neegative: The ref-NCA decision is not agreed by one or more P-NCAs

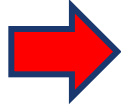

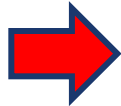

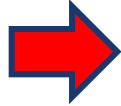

The VHP is closed

Divergent decision

Outcome of a VHP

- VHP approvable  The VHP received a positive feedback and the Sponsor can submit the CTA nationally in the MS involved
- VHP approvable with conditions  The VHP can receive the positive opinion only after the fulfillment of a specific condition. The national submission can be done only after the conclusion of the VHP
- VHP to be Rejected  The VHP received a negative opinion and the study cannot be submitted nationally. A resubmission in VHP is usually encouraged.

VHP Conditional Approval

The Ref-NCA inform
the Sponsor and
transfer the text of
the condition

P-NCA acceptance
/ non-acceptance

Divergent Decision

If no harmonized position are reached, the outcome of the VHP may be different between the various NCAs involved in the experimentation

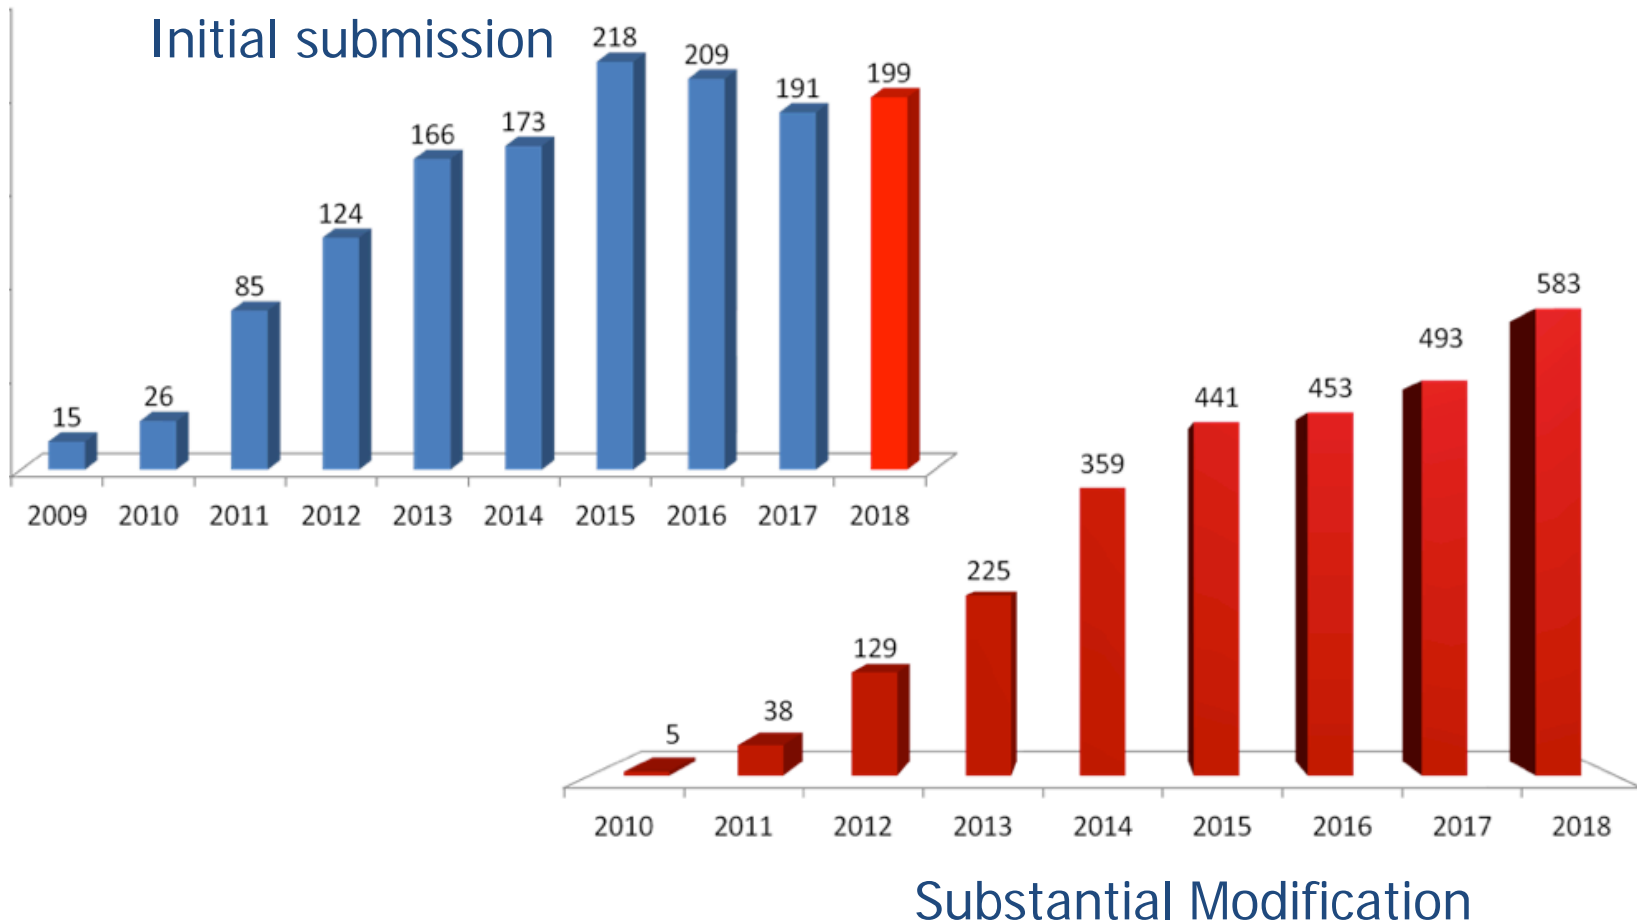

Different position among the MS

Involvement of Italy in VHP procedures (01.2015-09.2018)

Initial submissions involving Italy

Involvement of Italy in VHP procedures (01.2015-09.2018)

Substantial Amendments involving Italy

VHP: looking forward at the implementation of the new regulation

- Harmonization of the decisions with a very small percentage of divergences.
- Harmonization of the documents.
- Clear and defined timeline for providing a final decision.
- Streamline approach to the assessment.

Ethics committees in Italy

Currently in Italy there are about 100 different ethics committees distributed in different regions according to the number of inhabitants.

NB. The number of EC will be reduced to 40 with the implementation of the national law

Authorization of CTA in Italy

AIFA

- IMPD
- IB
- Protocol

Coordinator
EC

- IMPD
- IB
- Protocol
- ICF
- Administrative documents

- Different conclusions
- Different timelines
- Delay in the start of the CT

Collaborators
EC

- ICF
- Administrative documents
- "Local feasibility"

The VHP experience

Due to the lack of coordination between AIFA and ECs, currently requests for evaluation of clinical trials that are submitted via VHP in Italy undergo a serious delay in the national phase, since the rapid granting of AIFA authorization does not match the evaluation of the EC that follows a different timing.

Coordinated assessment AIFA and EC: The Pilot Project

The pilot project

Objective:

- Harmonization of the assessment, decisions and timelines

Endpoints:

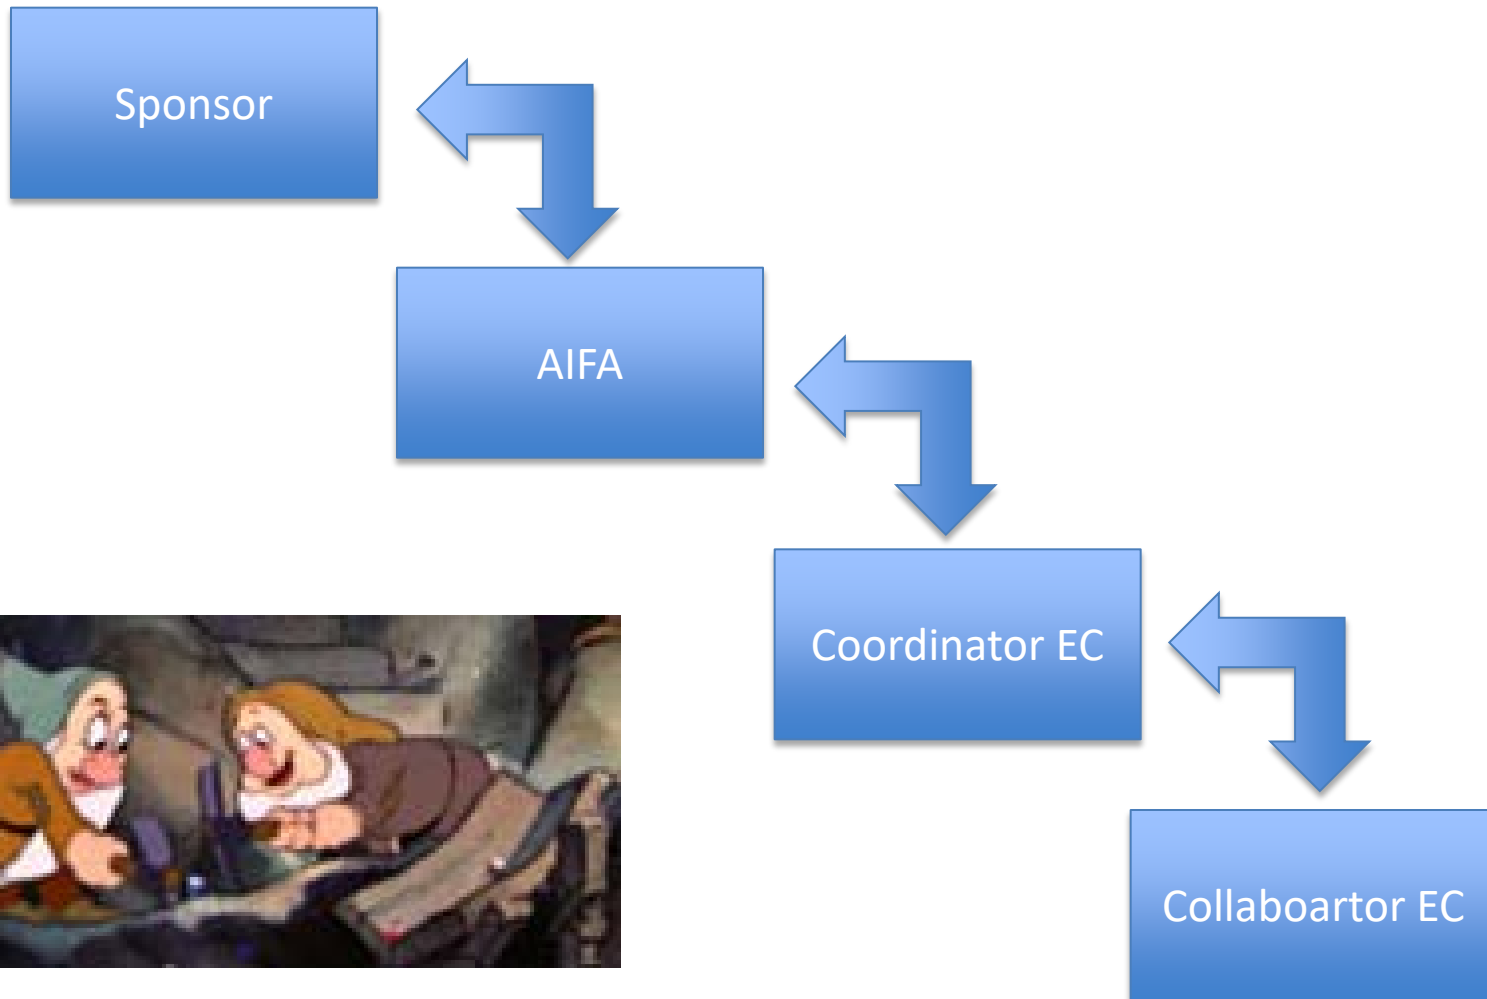

- Provide a complete national authorization according to the VHP timelines
- Assess the feasibility of the national system in view of the implementation of the regulation 536/2014.
- Practice with new approach to the joint assessment of the Part 1.

Coordinated assessment AIFA and EC: Main characteristics of the pilot project

- The Sponsor and the Coordinating Ethics Committee (CEC) voluntarily agree to participate in the coordinated assessment process.
- AIFA acts as a mediator between Sponsors and CEC. The CEC adheres to the procedure and agrees to comply with the VHP timelines.
- If the deadlines are not met during the procedure, the CEC can not conclude the assessment process which will be finalized only during the national phase.
- The conclusion of each phase of the VHP will be shared with the Sponsor through specific communication.

Pilot project Workflow

Application of VHP with request of participation to the pilot projects

The project started in 2016 and so far the joint assessment AIFA/CE has been requested for 38 initial submissions and 15 substantial amendments distributed in the years as follows:

Studies

Substantial Amendment

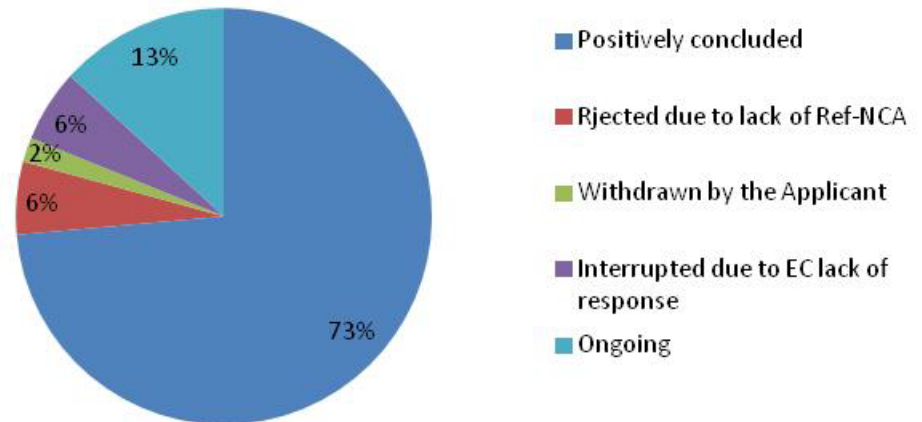

Preliminary Results of the pilot project

Distribution of Application on the basis of the trial phase

Outcome of the procedure assessed through the pilot project

Brief summary of the experience

1. Issues coming from the EC mainly on clinical part
2. Positive feedback from the interaction with Ecs
3. The assessment approach
4. The concept of Grounds for Non Acceptance (GNA)
5. How to correctly formulate a GNA
6. The definition of conditions
7. The assessment of a substantial amendment in VHP
8. Positive feedback from the industries
